

Introduction

Due to newly implemented regulation by EU to strength the security and improvement of prevention against any possible terrorist actions, the authorities have decided that all goods shipped by airfreight must be scanned. This more strict way of handling the goods will be implemented by April 29 of 2013.

Implementation

As supplier / provider of goods we have two options to handle this new regulation; either to let the receiver of the goods to be charged for the entire scanning procedure or second option is to get certificate from the Danish Transport Authority.

Ossi Connectors A/S have decided to implement the certificate from the authorities to pack the goods according to regulations and therefore will not be charged for the extra scanning costs.

Our certification number is **DK / KC / 03136-01 / 0513** and found in the EU database <https://webgate.ec.europa.eu/kdsa/>

For clients having the goods shipped by airfreight are kindly requested to claim this certificate by the freight agent to avoid unnecessary costs for the shipments.

Operation

Ossi Connectors are certified to ship airfreight goods according to the strict regulations which have the benefits for the clients of reducing the shipping costs. Comparing the options, the two above mentioned options, are equal to reduction of 40 EUR to 10 EUR per shipment. The amount of 10 EUR, we are charging clients, are handling fee from the authorities that can not be avoided.

You will find link to latest edition of the regulation here:
