

Conflict metals policy

Allegations that tantalum, tin, tungsten and gold mined in the Democratic Republic of the Congo available in the electronics supply chain.

Ossi Connectors A/S is aware of the allegations that tantalum (Ta), tin (Sn), Tungsten (W) and gold (Au) mined in the Democratic Republic of the Congo (DRC) may be making its way into the electronics supply chain and that profits from DRC tantalum, tin, tungsten and gold mining may be furthering certain unfair labour practices or other human rights violations in DRC.

Policies and procedures

Ossi Connectors A/S has adopted policies and procedures in an effort to determine, to the extent possible, whether its tantalum, tin, tungsten and gold supply chain includes tantalum, tin, tungsten and or gold mined in DRC. However, due to complexities of the tantalum, tin, tungsten and gold supply, Ossi Connectors A/S cannot verify the origin of all tantalum, tin, tungsten and gold used in its products.

Conflict metals detected

In the event that Ossi Connectors A/S verifies that tantalum, tin, tungsten or gold it intends to purchase has originated from DRC, it will use reasonable efforts to notify each customer of Ossi Connectors A/S whose products will be included DRC tantalum, tin, tungsten or gold of that fact and give such customers the option of having Ossi Connectors A/S purchase the applicable tantalum, tin, tungsten or gold from an alternative source.
