

Environmental plan

Activity influences

We recognise the influence by our activities and products on the environment and respect environmental related regulations, restrictions agreements and independent standards

Environment management

Environmental management is promoted based on the environmental system based on the ISO 14001 standard. This documentation available for recognition in our TQM quality handbook.

Improvement

A continuous improvement is aimed while promoting all possible economical and technical solutions for environmental pollution prevention.

Based on the above mentioned plans, we engage the following items as important environmental management topics.

Maintenance

Maintenance management of the water quality of factory effluent.

Organic solvent

Suitable management and reduction of the organic solvent which are used by the production process.

Waste streamlining

Promotion of waste streamlining.

Electric power

Reduction of the amount of the electric power used.

Natural resources

Reduction of the amount of the natural resources used.

Development and design

Environmental problem in development and design stage of product consideration.

In order to achieve the environmental plan , we promote the environmental preservation by setting up and re-examining the environmental purpose and a target together with all employees working at our production plant in Maribo, Denmark
